---

### RESEARCH INTERESTS

**Broad Areas:** Image processing, computer vision, and computational photography.

**Working On:** Study of camera motion in various image acquisition mechanisms including global shutter, rolling shutter, computational photography, and compressed sensing-based systems.

### EDUCATION

**Indian Institute of Technology Madras**, Chennai, India

August 2011–present

*Ph.D.*, Electrical Engineering

Guides: Prof. A.N.Rajagopalan and Prof. R. Aravind

CGPA: 9.41/10

**PSG College of Technology**, Coimbatore, India

August 2004–May 2008

*Bachelor of Engineering*, Electronics and Communication Engineering

CGPA: 9.48/10

### PUBLICATIONS

1. *Vijay Rengarajan*, Yogesh Balaji, and A.N. Rajagopalan. “Unrolling the Shutter: CNN to Correct Motion Distortions,” in Accepted for an Oral Presentation at International Conference on Computer Vision and Pattern Recognition (**CVPR**), July 2017.
2. *Vijay Rengarajan*, A.N. Rajagopalan, R. Aravind, and Guna Seetharaman. “Image Registration and Change Detection under Rolling Shutter Motion Blur,” *IEEE Transactions on Pattern Analysis and Machine Intelligence (PAMI)*, November 2016.

## RESEARCH PROJECTS

### Rolling Shutter (RS) Cameras:

- **Change detection:**

Proposed a general framework to model both the RS effect and motion blur in CMOS cameras. A novel camera motion estimation method was developed modelling the row-wise camera exposure mechanism for change detection between images affected by these two artifacts. The algorithm was then expanded to account for illumination variations in the scene and the 3D nature of the scene.

- **Super-resolution:**

Introduced the RS super-resolution framework for the first time in literature. An alternating minimization framework was proposed to estimate the row-wise camera motion and the underlying clean high-resolution image from low-resolution images having RS artifacts.

- **Rectification:**

Addressed the problem of correcting geometric distortions due to the RS mechanism from a single image for the first time in literature. Two approaches are followed: in the geometric approach, the key idea was to exploit the information embedded in the curves of the RS image to reveal the underlying RS camera motion, and in the learning-based approach, a novel convolutional neural network architecture with long rectangular kernels is proposed to automatically choose and learn desired image features for motion estimation.

### Camera Motion in Compressed Sensing Cameras:

Studied the effect of camera motion during image reconstruction in single pixel cameras. An algorithm based on recursive blockwise splitting of the compressively sensed vector was proposed to estimate the camera motion. The convergence of the algorithm was discussed based on the properties of the measurement matrix. The application of motion estimation was shown for face recognition under camera motion in compressed domain.

### Motion Blur in Global Shutter Cameras:

Developed a motion blur estimation algorithm to reduce the time complexity while handling very large images. A study was done on how much the motion of the original image could be approximated by the motion experienced by small subimages. Several results were shown for change detection between large images having motion blur.

## TEACHING EXPERIENCE

**Teaching Assistant**, Indian Institute of Technology Madras August 2011–present  
Assisted in preparing and conducting lab assignments and class tutorials for the following courses:  
*Image Signal Processing* - Prof. A.N. Rajagopalan  
*Digital Signal Processing and Probability Foundations* - Prof. R. Aravind  
*Computational Photography* - Prof. Kaushik Mitra

## WORK EXPERIENCE

**Motorola India Private Ltd.**, Bangalore, India August 2008–July 2011  
*Software Engineer*  
Software development and test engineer for CDMA-EVDO base station products.

## AWARDS

**Doctoral Consortium Participation and Travel Award** at the IEEE Conference on Computer Vision and Pattern Recognition (CVPR) 2016  
**Institute Research Scholar Award** for excellence in research awarded by IIT Madras in April 2015

## PROFESSIONAL ACTIVITIES

**Reviewer** for the Conference on Neural Information Processing Systems (NIPS 2016), IEEE Winter Conference on Applications of Computer Vision (WACV 2015 and 2016) and Indian Conference on Computer Vision, Graphics, and Image Processing (ICVGIP 2016)

Assisted Prof. A.N. Rajagopalan in reviewing for the following conferences:  
- International Conference on Advances in Pattern Recognition (ICAPR 2015)

- Indian Conference on Computer Vision, Graphics, and Image Processing (ICVGIP 2014)
- International Workshop on Computational Cameras and Displays (CCD 2014)

## RELEVANT COURSEWORK

Image Signal Processing	Digital Video Processing
Digital Signal Processing	Pattern Recognition
Optimization Methods	Advanced Digital Signal Processing
Probability Foundations	Detection and Estimation Theory
Functional Analysis	Mathematical Methods and Algorithms
